DRB Listing Packet
Debt Relief Bot ($DRB)
Token & LP Overview, Security, Market, Community
Base Chain
March 2026

@Grok on X $DRB Launch Post: https://x.com/grok/status/1897949874961650169?s=20

Token Fundamentals

- Token Name: Debt Relief Bot
- Symbol: $DRB
- Contract Address: 0x3ec2156d4c0a9cbdab4a016633b7bcf6a8d68ea2
- Total Supply: 100,000,000,000 (100B) - 100% in circulation
- Decimals: 18
- Status: Fixed supply - No mint function exists (verified in ClankerToken template)

Token Contract Security Highlights

- Uses Clanker's audited ClankerToken template (33 files)
- No mint function - supply fixed forever
- No upgradeability - immutable code
- No owner/admin privileges after deployment

Fixed Token Supply

- No Public Mint Function (Cannot Create More Tokens)
- Entire 100B supply minted once in constructor. No public mint() exists.
  File 1 of 33: ClankerToken.sol
  Lines 28–32 (constructor) + Lines 68–75 (crosschainMint only)

```solidity
// One-time mint in constructor
_mint(msg.sender, maxSupply_);

// Only official Base bridge can ever mint (cross-chain)
if (msg.sender != Predeploys.SUPERCHAIN_TOKEN_BRIDGE) revert Unauthorized();
```

Immutable Contract

- No Upgradeability (Code Cannot Be Changed)
- No proxy pattern, no UUPS, no upgrade functions. Logic is permanently locked.
  File 1 of 33: ClankerToken.sol
  Lines 15–20 (contract declaration)

```solidity
contract ClankerToken is ERC20, ERC20Permit, ERC20Votes, ERC20Burnable, IERC7802 {
    // No upgradeTo(), no initialize(), no proxy code
}
```

No Hidden Fees/Taxes + No Owner Privileges After Deployment

- Standard 1:1 transfers (no taxes). Deployer can only update image metadata.
  File 1 of 33: ClankerToken.sol
  Lines 45–50 (_update) + Lines 35–40 (updateImage)

```solidity
function _update(address from, address to, uint256 value) internal override {
    super._update(from, to, value);  // Clean transfer - zero fees
}

function updateImage(string memory image_) public {
    if (msg.sender != _deployer) revert NotDeployer();
    _image = image_;  // Metadata only
}
```

Liquidity Security

Liquidity is permanently locked in the Clanker LP Locker contract.

- Liquidity Pool Address: 0x5116773e18a9c7bb03ebb961b38678e45e238923
- LP Locker Contract: 0x5ec4f99f342038c67a312a166ff56e6d70383d86 (Clanker v3 – Permanent LP Vault)
- LP NFT: Uniswap V3 Nonfungible Position Manager (0x03a520b32C04BF3bEEf7BEb72E919cf822Ed34f1)
  Token ID: 2246136

Key Proofs (Anti-Rug)

- The LP contract contains no `decreaseLiquidity`, no `burn`, no NFT `transferFrom`, and no other functions capable of removing principal liquidity (proof by absence of these functions).
- Only trading fees can be collected via Uniswap's official `collect()` function.
- Withdraw functions (`withdrawETH` & `withdrawERC20`) are limited to stray funds and cannot touch the locked LP position.
- The LP NFT can only be received from the official Clanker Factory during deployment.
  - LP Locker Source Code, File 1 of 10, Lines 195-205:

```
 // Only clanker team EOA can send the NFT here
if (from != _factory) {
    revert NotAllowed(from);
}
```

- The LP NFT is permanently locked inside the locker contract with no withdrawal or burn functions.

Lock Confirmation Transaction

- https://basescan.org/tx/0x2cf2f8330f8e1b72c5efdc1db80790e6f47ff0c3af6a33cec31186f2c7df795e
- (On-chain `Received` event confirms LP NFT transfer to locker.)

Ownership & Control

- Ownership of the LP Locker can be permanently renounced.
- Deployer address (Grok wallet): 0xb1058c959987e3513600eb5b4fd82aeee2a0e4f9
- Recorded in the TokenCreated event (Log Index 269) of the deployment transaction.

Fee Transparency

- A fixed percent of all trading fees are collected through the `collectRewards(uint256 _tokenId)` function in the Clanker Locker contract (File 1 of 10: LpLockerv2.sol, Lines 108–122).
- A fixed .4% of fees are automatically sent to the designated Grok wallet (0xb1058c959987e3513600eb5b4fd82aeee2a0e4f9).
- Every collection emits the `ClaimedRewards` event (Line 125) with token amounts, protocol fee taken, and recipient reward.

Deployment & Supporting Evidence

Token Deployment Transaction (by Clanker Factory:)

- Clanker Factory: 0x375C15db32D28cEcdcAB5C03Ab889bf15cbD2c5E
- Grok wallet recorded as deployer in TokenCreated event Log 269 (image below)

Community & Market Overview (as of March 21, 2026)

Market Cap: ~$7.3M–$7.4M

24h Trading Volume: ~$1.1M–$1.2M

Price: ~$0.000073 USD

Liquidity (main pools): ~$1.8M+ on Aerodrome / Uniswap V3 (Base)

Holders: 138,131 (Basescan.org)

Community: Active on X (@DRBTaskForce + @mleejr), Telegram Group

ATH: $DRB wicked over $40M on March 11-12, 2025 and January 2026
